Real-time Stock Market Analysis Tool using MS Excel

Contact Name: Michael Nolan

Customer Testimonial:

"Paltech Solutions delivered the stock averaging spreadsheet I needed in half a day. When changes were needed, they addressed each item immediately and returned the work the same day. Their service was outstanding and I'm satisfied with their work."

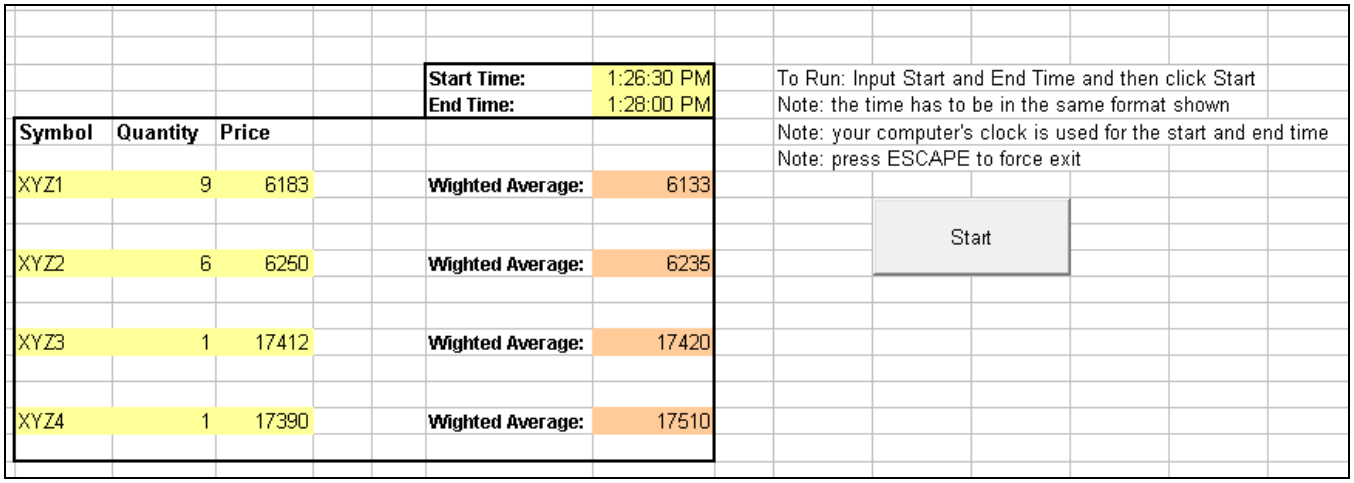
Michael Nolan

Customer Requirement:

An automated Excel application is required to calculate the weighted average of the real-time stock traded at a specified start and end time.

Our Solution:

Visual Basic code was written in an Excel spreadsheet that performed the required tasks. The program communicated with third party stock market APIs to fetch the required data for analysis.



Sample View of the Application
