

Stock Market Data Trend Analyzer Using MS Excel

Contact Name: Mike Starks

Location: Little Rock, Arkansas, USA

Customer Testimonial:

“After speaking with multiple Excel / VBA programmers, I chose Paltech Solutions and I am glad I did. Their work exceeded all my expectations with a much quicker turnaround time than they originally estimated. They delivered more in less time. What more could I ask for?”

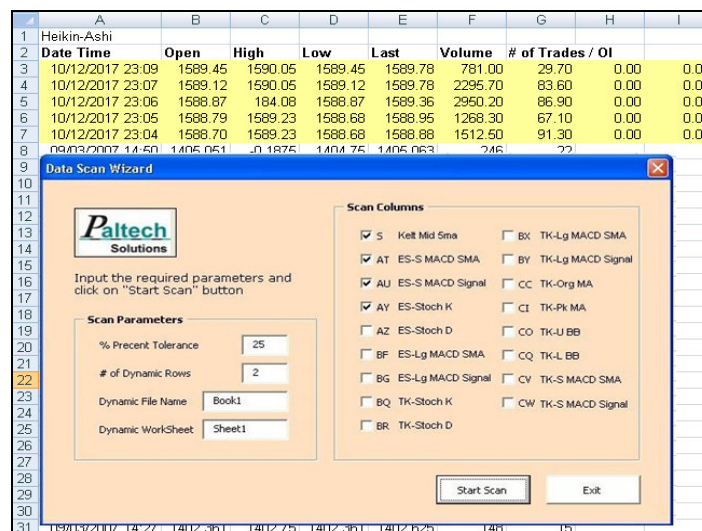

Mike Starks

Customer Requirement:

An automated Excel application is required to scan a database to find specific matches as defined by a set of variables. The application is to run every minute as new data becomes available. The program must be written in the most efficient way to have the maximum performance speed.

Our Solution:

Visual Basic code was written in the Excel spreadsheet that performed the required tasks. The program included a Graphical User Interface (i.e. buttons and input boxes) for changing the required processing parameters. The application speed was outstanding and the required processing procedure was completed for over 50,000 records in less than 10 seconds.

Program User Interface
